

ABSTRACT OF THE DISCLOSURE

Herein disclosed is a display controlling apparatus, comprising: data output units (140) to be electrically connectable to respective display apparatuses; an information inputting unit (110) to be operable to have inputted therein information to be required for said display apparatuses to display on screens; a controlling unit (120) for producing contents to be displayed by said display apparatuses from said information inputted by said information inputting unit; and a video memory (130) having stored therein said contents produced by said controlling unit, wherein said controlling unit (120) is operative to adjust the resolution of each of said contents to be displayed by said display apparatuses on the basis of the number of said display apparatuses electrically connected to said signal outputting units, and to output said contents to be displayed at said adjusted resolution by said display apparatuses through said data output units (140).
